

HOW TO USE THE PARTS LISTS AND DIAGRAMS

You can access our PART LOCATOR at: <https://arbikas.com/diagrams>

If you have no profile in our system you can use "diagrams" for both user and pass.

The figures in a part list illustrate the major subassemblies in the printer and their component parts. A table accompanies each exploded view diagram. Each table lists the item number for the replaceable part, the associated part number for the item, the quantity, and a description of the part.

CAUTION While looking for an electrical part number, pay careful attention to the voltage listed in the description column to ensure that the part number selected is for the correct model of the printer.

CAUTION While looking for controller or other board/ assembly pay careful attention to the abbreviation on options of the machine listed in the description column to ensure that the part number selected is for the correct model of the printer. For instance formatter board is different in many models with or without network (or with / no duplex... or other option)

Parts that have no item number or part number listed are not field replacement parts and cannot be ordered.

In some part lists abbreviations "SNA" or "X" are used for parts that are not offered as original parts. SNA comes from Service Not Available; X stands for Not available for orders.

Anyway, some of the parts not offered as original can be offered either as compatible (3rd party) or as refurbished.

It is recommended to use part lists for a correct identification of spare parts needed.

Keep in mind that in some of the cases, part number written on the spare part itself, may differ from the identifying part number of the same part in the part list, by which it can be ordered.

Using part lists helps avoiding mistakes and further troubles. That's why we avoid identifying parts by photos, by location or function description.

If you need any help identifying a part do not hesitate to contact us by e-mail: info@arbikas.com.

If you do not find a part list you need, please notify us at info@arbikas.com and we will make our best to upload it at our Part Locator for you.
